GRUPUL INDUSTRIAL COMPONENTE (GIC) is a holding, which includes today several companies operating on different markets: **automotive industry**, household goods, stock exchange and marketable securities transactions. 80% of its turnover is done in the **Industrial division** (automotive). **SC Subansamble Auto SA Pitesti** is the founder of GIC and major shareholder in all group societies.

SUBANSAMBLE AUTO SA is a private joint stock company, established in 1977, operating in the automotive industry, both for OEM and after market parts. With over 25-year experience in metalworking and over 20-year experience in plastics, the company is a major supplier for all the Romanian vehicle manufacturers (DACIA, DAEWOO ROMANIA, ARO, ROMAN and ROCAR).

The R&D Department, the Designing Department as well as the Quality Assurance System that is certified ISO 9001:2000 (since 1996), ISO 14001:1997 and ISO TS 16949:2002 stand for a warranty of the product quality.

The company has constantly invested in modern equipment, paying a special attention to the R&D Department, which now has work stations in CATIA and EUCLID and personal computers working in Autocad and PowerMill.

But Subansamble Auto has also invested in people, many of its engineers being specialized in western companies and then becoming trainers for the rest of the team.

A good communication between our clients and our employees ensures a high quality and a promptly answer concerning our products and services. Customers as: **Dacia-Renault, Daewoo, Ford, Caterpillar, Aro Campulung, Lear, Yazaky, Johnson Controls, Valeo, Faurecia, etc.** are strong references for the projects accomplished by our experts – new designs both for the interior, and for the exterior.

Our **Industrial Group** produces automotive parts that cover a wide field of processing systems, among which we can mention:

1. Thermoforming parts of composite materials: door panels, luggage shelves, interior lining, thermoformed shelves, etc;
2. Thermo-blowing parts: air ducts, heating and conditioning systems, etc.
3. Plastic injected parts: instrument panels, interior lining, door panels, bumpers;
4. Injected parts of PU foam: seat cushion quilt, dashboards, steering wheels, other different parts;
5. Metal parts of iron sheet, tubes, profiles, in a wide range and kinds of products;
6. Surface covering operations - zinc coating operations.
7. Powder painting - painting operations in electrostatic field – NORDSON painting line with automatic conveyor.
8. Exhaust systems and catalytic converters;
9. Mechanical processing through machining: axels, water pumps, etc.;
10. Wire harnesses (export in France/RENAULT and Belgium/FORD);
11. Bitumen sound deadeners.
